Statement on Responsible Minerals

E3 Displays LLC (E3D) is committed to conducting business in an ethical and responsible manner and supports industry efforts to promote responsible sourcing of minerals used in products supplied to our customers.

E3 Displays recognizes concerns regarding the sourcing of Tin, Tantalum, Tungsten, and Gold (3TG) from conflict-affected and high-risk areas and supports efforts to improve transparency and responsible sourcing practices throughout the global supply chain.

E3 Displays does not directly purchase raw minerals from mines, smelters, or refiners. As a manufacturer of electronic display assemblies and related products, E3 Displays relies on information provided by suppliers regarding the origin of materials contained within purchased components and assemblies.

E3 Displays expects suppliers to establish appropriate due diligence processes regarding the source and chain of custody of 3TG minerals used in products supplied to E3 Displays. Suppliers may be requested to provide current Conflict Minerals Reporting Templates (CMRTs), declarations, or other supporting documentation when required by customer, regulatory, or contractual requirements.

E3 Displays supports the Organisation for Economic Co-operation and Development (OECD) Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas and encourages suppliers to source materials through responsible and audited smelters and refiners, such as those validated under the Responsible Minerals Assurance Process (RMAP), whenever feasible.

When potential sourcing concerns or high-risk smelters are identified, E3 Displays will work with suppliers to obtain clarification, supporting documentation, mitigation plans, or corrective actions as appropriate.

E3 Displays is committed to supporting customer requirements related to responsible minerals sourcing and will continue to work with suppliers to improve transparency and responsible sourcing practices throughout the supply chain.
